

Plastic "Y" Air Splitters

Plastic "Y" Air Splitters
AY/HY

ADAPTER Y

Here you will find **ADAPTER** and **HOSE** "Y" air splitters. Similar to the Adapter and Hose "T" splitters, the "Y" splitters come in various sizes. Remember, **ADAPTER** splitters are designed to work in conjunction with the air output collar on the unit itself (splitter placed directly on the unit). The **HOSE** splitters are designed to accept ducting on all three ports.

ADAPTER and **HOSE** Y air splitters are a preferred choice over the T fittings. Not that the T fittings will not work, however, airflow chooses the path of least resistance and a Y fitting creates more of an even flow of air. They are sized the same way as the T fittings.

Example:

AY664 - Adapter Y - 6" ON the air output collar. 6" duct one direction, 6" duct another direction.

Example #2:

HY644 - Hose Y - 6" incoming duct (main), 4" duct one direction, 4" duct another direction.

Price \$59.00
